Sarajevo, 18th September 2026

To: All Interested Consultants

Project: Air Quality Improvement Project (AQIP)

Contract title: Preparation of Main Design for the reconstruction of the facility for Reference Laboratory Grdonj

Subject: Response to request for clarification of Request for Expression of Interest document _ second

Dear Sirs,

We are hereby providing you with the answer to question submitted by the prospective Consultant.

Question 1:

Reference is made to the Request for Expression of Interest for the "Preparation of Main Design for the Reconstruction of the Facility for Reference Laboratory Grdonj" under the Air Quality Improvement Project (AQIP), as amended by Amendment No. 2 to the REOI document.

With regard to Key Expert – Position 5: Fire Safety/Protection Engineer, we would like to request clarification on the following:

Would a graduate engineer of technology who has passed the professional examination in the field of fire protection and possesses the minimum number of years of relevant experience on similar projects be considered acceptable for fulfilling the qualification requirements for the aforementioned position?

Answer 1:

According to the current regulations in the Federation of Bosnia and Herzegovina, the fire and explosion protection report/project must be prepared and certified by a legal entity registered for this type of work. A legal entity must have at least two graduated engineers from different fields of architecture or construction, and mechanical or electrical engineering with appropriate authorizations for natural persons, as we have already defined.

If a natural person who is a technologist by profession has passed a professional exam and is authorized to design fire protection studies from the competent ministry, and has a minimum number of years of experience in creating this type of project, he can be accepted as an authorized person to create it.

Attention should be paid to the fact that all criteria, including the certification of this Elaborate, must necessarily refer to the Law on Fire Protection and Firefighting (FBiH newspaper no. 64/09), which clearly defined what is the content of project documentation in terms of this Act. This means that the created Elaborate on fire and explosion protection must be signed by an authorized person, the controller must also be an authorized person, as well as that the final issuance of the certificate and verification of the Elaborate is performed by a legal entity that is registered and authorized for these tasks.

Sincerely,

Benjamin Čekić, PMU Coordinator

Mirsad Ibrović, PMU Leader
